

CONTACT

- +44 7505 520927
- d.bitsanis@pm.me
- Milton Keynes, U.K.
- <https://github.com/jimkits/>

EDUCATION

- 2006 – 2007
University of Plymouth
 - MSc Web Technologies and Security
- 2002 – 2005
University of Sussex
 - BSc Computer Science

TECH SKILLS

- React, TypeScript, JavaScript, C#, HTML, CSS, YAML
- Azure DevOps, GitHub Actions, Jenkins, TeamCity
- Kubernetes, Docker
- DataDog Monitoring & Synthetic Tests
- MS SQL, SQLite
- Claude Code, GitHub Copilot
- Playwright, Selenium, NUnit, XUnit
- JMeter, Postman
- TestRail

SKILLS

- Software Delivery Lifecycle
- C# / TypeScript Development
- DevOps & CI/CD
- Microservices & APIs
- Test Automation Architecture
- Agentic Coding Workflows
- Mentoring
- Agile / Scrum

LANGUAGES

- English (Fluent)
- Greek (Native)

DIMITRIOS BITSANIS

SOFTWARE ENGINEER

PROFILE

I'm a software professional with over 15 years of experience across quality engineering, test automation, software delivery, and complex enterprise environments including Moody's and Salesforce.

Over time, my work has moved increasingly toward software engineering: contributing to C# codebases, building automation frameworks and internal tooling, working across microservices and APIs, delivering React/TypeScript components, and shaping CI/CD and release practices.

Alongside this, I have been building independent full-stack products to deepen my product engineering experience. I am now intentionally pursuing a dedicated Software Engineering path, particularly in .NET/product engineering roles, bringing strong coding foundations, broad SDLC exposure, and a quality-first mindset.

WORK EXPERIENCE

- Freelance & Independent Projects

Jan 2026 – Present
- Software Engineer
- Self-directed development & client work.
- Built a mobile app for personal finance tracking for a client. Users import bank transactions via CSV, tag and categorise them, to get spending and net worth insights. Designed for local-only storage; no server, no account, all data stays on device.
Tech stack: Flutter, Dart, GitHub Actions, VS Code, Claude Code
 - Built a browser-based 3D claw machine game with real-time rigid body physics. (<https://crane-game-nu.vercel.app/>)
Tech stack: React, Three.js, Rapier, VS Code, Claude Code, Vercel
 - Built a full-stack Dungeons & Dragons compendium covering character classes, with end-to-end test coverage across both frontend and backend. (<https://dnd-theta-ten.vercel.app/>)
Tech stack: React, C#, Playwright, Typescript, VS Code, Vercel
 - Built a full-stack activity tracker with shareable boards, allowing other users to view or collaborate on your activities. (<https://adventure-board-three.vercel.app/>)
Tech stack: React, Next.js, Vitest, Playwright, VS Code, Claude Code, Vercel, Supabase

- Vitrifi

Oct 2025 – Dec 2025
- Senior Software Engineer in Test
- Brief engagement; role concluded due to company closure.
- Delivered production user-facing components with automated test coverage as part of the core React/TypeScript development team.
 - Reduced regression cycles by 50% by building a front-end automation framework from scratch, using Playwright and TypeScript.
 - Tripled regression coverage and increased release confidence by restructuring the test suite architecture.
- Tech stack: React, TypeScript, CSS, XUnit, Playwright, TestRail

- Moody's Corporation

Jun 2019 – Feb 2025
- Senior Quality Engineer
- Worked across test engineering and development teams, owning quality and tooling for the flagship product and multiple microservices, while contributing across the full engineering lifecycle.
- Ensured production quality deployments by owning the integration test framework for a core internal authentication microservice.
 - Guaranteed high quality releases by designing and maintaining CI/CD pipelines in Azure DevOps (YAML) to build, test and validate every PR before deployment.
 - Reduced system verification from 1 hour to 10 minutes by migrating automated test cases to DataDog Synthetic Monitoring.
 - Proved high performance across critical authentication flows by building and maintaining JMeter performance tests, validating response times under 10ms.

- Modernised the flagship products automation stack by replacing a legacy C# and Selenium framework with a new Playwright and TypeScript solution, simplifying adoption across teams.
- Accelerated team adoption of the new Playwright and TypeScript framework by mentoring QE engineers on best practices and codebase conventions.

C#, Azure DevOps, MS SQL, Microservices, Rest APIs, JMeter, XUnit, Selenium, Playwright, TypeScript

Salesforce

Jan 2014 – Sep 2018

Senior Quality Engineer & Software Engineer

Took on a hybrid Developer/QA role, contributing directly to the C# codebase as part of the architectural transition of flagship products from monolithic structures to microservices.

- Reduced automated test execution time from 1 week to 10 hours by architecting a parallelized execution engine and leading a strategic migration from TeamCity to Jenkins.
- Led quality and release efforts for the Advertising Studio suite, partnering with product teams from the planning phase to ensure architectural reliability and feature confidence.
- Developed a custom automation framework from the ground up in C#, establishing the technical standards adopted across the QA engineering team.
- Mentored QA engineers across the department in automation best practices and engineering standards, enabling the team to contribute directly to the shared codebase.

C#, MS SQL, Selenium, TeamCity, Jenkins, NUnit

Betgenius

Apr 2011 - Dec 2013

Senior QA

Took the lead on testing the flagship product and drove the selection and adoption of automation and performance testing tools as part of the daily build process.

Sogeti UK Ltd

Sep 2009 - Apr 2011

Test Consultant

Wrote and refactored UI automation tests in C# and Selenium, introduced a reporting layer adopted by the release team, and mentored new QAs on the framework.

Testhouse

Apr 2008 - Jun 2009

Test Consultant

Delivered manual, exploratory, and performance testing across multiple client engagements, adapting tooling and approach to suit each project's needs.
